provider of Accredited Activities
under the RACGP QI&CPD Program.*

TOTAL RACGP QI & CPD POINTS: 4 (CATEGORY 2)

FREE DINNER INCLUDED

BOOKINGS ESSENTIAL

■ Diagnosis and management of head and neck lumps

Dr Muzib Abdul-Razak MFRCSE, FRACS, MCh (Surgical Oncology)

At the end of the workshop, GPs should be able to confidently diagnose different head and neck lumps. They should also be able to undertake further relevant investigations, prioritise management and make appropriate referrals. They will also be aware of different management strategies and provide postoperative care after specialist management.

Dr Muzib Abdul-Razak is a head & neck surgeon and surgical oncologist at Sydney Adventist Hospital and is a part of Northern Surgical Oncology (NSO) group. His public appointment is at Westmead Hospital, where he is an integral member of the Head and Neck Cancer Service, Crown Prince Mary Cancer Centre.

■ Radiotherapy in the management of head and neck cancers

Dr Andrew Fong B. Sci (Med) MB BS MeH FRANZCR

At the end of the workshop GPs should be able to appreciate the different radiotherapy and chemo-radiotherapy approaches to head and neck cancer and expected outcomes. The GP should also be able to recognise the acute and late toxicities of head and neck cancer, and be able to manage those toxicities

Dr Andrew Fong is a radiation oncologist at the Sydney Adventist Hospital. He was the 2009 RANZCR Withers and Peters Fellow, and has interests in head, neck and lung cancer. He specialises in advanced radiotherapy techniques such as Tomotherapy and established the stereotactic ablative body radiotherapy (SABR) program at Radiation Oncology Centres.

■ The cancer patient journey

Consultant radiation oncologist together with oncology nurses will guide GPs through the patient experience of chemotherapy and radiation treatment for head and neck cancer. So that GPs can provide up-to-date patient advice on radiation and chemotherapy, GPs will visit the Day Infusion and Radiation Oncology departments to see advances in patient care and treatment. The guides will outline the common concerns and side-effects of treatment and how these can be managed in a GP setting.
