

### BACKGROUND

- Frailty is a clinical syndrome including: weakness, low energy, slowed walking speed, decreased physical activity, and weight loss.
- It is a chronic progressive condition that develops along a spectrum of severity resulting in a heightened vulnerability to adverse outcomes that manifest in the face of stressors.
- Frail older adults are more likely to have delayed recovery from illness and/or are more likely to fall; to develop greater functional impairment, including becoming disabled or dependent; or to die.

### SCREENING

- Screening identifies patients at high risk of adverse clinical outcomes including:
  - Prolonged recovery from illness
  - Increased risk of falls
  - Greater functional impairment leading to disability and dependency
  - Mortality
- The goal of screening is to prevent loss of independence if possible
- Gold standard: Comprehensive Geriatric Assessment
  - A multidisciplinary approach to exclude modifiable precipitating causes of frailty, including causes that are treatable; to improve the core manifestations of frailty, especially physical activity, strength, exercise tolerance, and nutrition; thereby minimizing the consequences of the vulnerability of frail older adults.

#### Criteria that Define Frailty (≥3 indicates frailty)

Characteristic			
Weight loss	Meets criteria for frailty if: Lost >10 pounds unintentionally last year		
Exhaustion	<p><b>Meets criteria for frailty if answer:</b> Felt that everything I did was an effort in last week or could not get going in last week Self-report of “moderate or most of the time” for either:</p> <p><b>1) I felt that everything I did was an effort in the last week:</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Rarely or none of the time (&lt;1 day)</li> <li><input type="checkbox"/> Some or little of the time (1 to 2 days)</li> <li><input type="checkbox"/> Moderate amount of the time (3 to 4 days)</li> <li><input type="checkbox"/> Most of the time</li> </ul> <p><b>2) I could not get going in the last week:</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Rarely or none of the time (&lt;1 day)</li> <li><input type="checkbox"/> Some or little of the time (1 to 2 days)</li> <li><input type="checkbox"/> Moderate amount of time (3 to 4 days)</li> <li><input type="checkbox"/> Most of the time</li> </ul>		
Slowness	<p><b>Meets criteria for frailty if time to walk 15 feet (4.57 meters) is:</b></p> <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; vertical-align: top;"> <p><b>Men</b> ≥7 seconds for height ≤173 cm (68 inches) ≥6 seconds for height &gt;173 cm (68 inches)</p> </td> <td style="width: 50%; vertical-align: top;"> <p><b>Women</b> ≥7 seconds for height ≤159cm (63 inches) ≥6 seconds for height &gt;159cm (63 inches)</p> </td> </tr> </table> <p>Equipment: 4-meter course in walkway of ≥4.5 meters, a stopwatch. Participant will walk 15-foot length twice at his or her usual pace. Use average of 2 trials.</p>	<p><b>Men</b> ≥7 seconds for height ≤173 cm (68 inches) ≥6 seconds for height &gt;173 cm (68 inches)</p>	<p><b>Women</b> ≥7 seconds for height ≤159cm (63 inches) ≥6 seconds for height &gt;159cm (63 inches)</p>
<p><b>Men</b> ≥7 seconds for height ≤173 cm (68 inches) ≥6 seconds for height &gt;173 cm (68 inches)</p>	<p><b>Women</b> ≥7 seconds for height ≤159cm (63 inches) ≥6 seconds for height &gt;159cm (63 inches)</p>		
Low Activity Level	<p><b>Meets criteria for frailty if:</b> ≤270 kcal of physical expenditure on activity scale per week (18 items*)</p>		
Weakness	<p><b>Meets criteria for frailty if grip strength (average of 3 trials, dominant hand) is:</b></p> <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; vertical-align: top;"> <p><b>Men</b> ≤29 kg for BMI ≤24 ≤30 kg for BMI 24.1–26 ≤30 kg for BMI 26.1–28 ≤32 kg for BMI &gt;28</p> </td> <td style="width: 50%; vertical-align: top;"> <p><b>Women</b> ≤17 kg for BMI ≤23 ≤17.3 kg for BMI 23.1–26 ≤18 kg for BMI 26.1–29 ≤21 kg for BMI &gt;29</p> </td> </tr> </table> <p>Equipment: Jamar hand dynamometer Participant attempts to squeeze the dynamometer maximally 3 times with the dominant hand.</p>	<p><b>Men</b> ≤29 kg for BMI ≤24 ≤30 kg for BMI 24.1–26 ≤30 kg for BMI 26.1–28 ≤32 kg for BMI &gt;28</p>	<p><b>Women</b> ≤17 kg for BMI ≤23 ≤17.3 kg for BMI 23.1–26 ≤18 kg for BMI 26.1–29 ≤21 kg for BMI &gt;29</p>
<p><b>Men</b> ≤29 kg for BMI ≤24 ≤30 kg for BMI 24.1–26 ≤30 kg for BMI 26.1–28 ≤32 kg for BMI &gt;28</p>	<p><b>Women</b> ≤17 kg for BMI ≤23 ≤17.3 kg for BMI 23.1–26 ≤18 kg for BMI 26.1–29 ≤21 kg for BMI &gt;29</p>		

\*Walking for exercise, moderately strenuous household chores, mowing or raking the lawn, gardening, hiking, jogging, biking, exercise cycle, dancing, aerobics, bowling, golf, singles or doubles tennis, racquetball, calisthenics, swimming  
To compute kcals expended per week, use the formula: kcal/week = [activity-specific MET (kcal/kg × hour) ] × [duration per session (min) / 60 min] × [body weight (kg)] × [number of sessions in the last 2 wk / 2] × [number of months per year activity was done]
