

## EXPRESSION OF INTEREST

### INTEGRATE Study by The George Institute for Global Health

- ✓ **\$500 reimbursement for participating practices**
- ✓ **40 category 1 QI&CPD points for the 2017-2019 triennium**
- ✓ **Access to HealthTracker software for CVD management**

Cardiovascular disease (CVD) is associated with large morbidity and premature mortality and the use of anti-hypertensive, statin and anti-platelet therapies have proven benefits. But there are still many patients with high risk of CVD who are not prescribed or compliant with the recommended treatments. The George Institute would like to invite you to participate in this study that aims to assess whether integrating three evidence-based tools will improve cardiovascular outcomes.

These three methods include:

- 1) A GP-focused decision support and audit tool (HealthTracker)
- 2) Availability of a range of cardiovascular Polypills
- 3) A Pharmacy-led adherence support service

We are looking for general practices that use either **Best Practice** or **Medical Director** Software who would be interested in participating in this study.

---

I am interested in participating in this study:

**Name:**

**Practice Name:**

**Practice Phone Number:**
