

Expression of Interest

Join the NSW Diabetes Taskforce Working Groups to improve outcomes for people with Diabetes in NSW

The NSW Diabetes Taskforce is seeking expressions of interest from senior clinicians (nursing, medical, allied health), service managers and consumers to join its working groups, commencing November 2016, and until March 2017.

The NSW Diabetes Taskforce has been established to oversee a standardised state-wide approach to evidence-based clinical care elements of diabetes management to deliver improved experience and health outcomes for people living with diabetes, and value to the system. **Three working groups** are being set-up to support the following components:

- People at risk of diabetic foot complications.
- People requiring hospitalisation and insulin management.
- People living in the community with diabetes.

Each working group will contribute to the following outcomes of diabetes management:

- Implementation and consistent application of standardised evidence-based clinical care components of diabetes management in NSW.
- Reduction in unwarranted clinical variation.
- Equity of access to evidence-based care components of diabetes management.

The expected time commitment for each of the working groups is at least monthly meetings for up to two hour duration and some additional time outside of meetings to follow-up on action items. Teleconference and WebEx will be available for those unable to attend in person.

Expressions of Interest are requested by **21st November, 2016** to Marina Davis, Network Manager, Acute Care Projects Team via email Marina.Davis@health.nsw.gov.au or

Phone: (02) 9464 4621. Please provide the following details in your response:

- Working group of interest
- Current role or consumer
- Current employer
- Interest and experience in this area of diabetes management

We expect that we will receive a greater number of nominations than there are places on the working groups. Membership will be determined based on a representative model to ensure a mix of services, locations and clinician groups.
