**WiSE opens  
15 January  
2017**

We welcome you to visit us and explore our facilities.

The WiSE Clinic has been established to provide the community with greater choice in how they access urgent medical treatment. WiSE provides coordinated, on-site acute care, from the initial consultation and diagnostic service, to treatment and specialist follow-up care where needed.

# IN NSW 70%

OF HOSPITAL EMERGENCY DEPARTMENT  
PRESENTATIONS ARE NOT ADMITTED

WiSE was formed by a group of specialist emergency doctors and healthcare managers to deliver acute and urgent care outside of the hospital environment. In NSW 70% of hospital emergency department presentations are not admitted. Patients with acute illnesses, who require urgent care or specialist consultation, have no option between their general practitioner and a hospital-based emergency department.

## When to use the WiSE Clinic

If a patient has an acute or urgent condition that requires emergency consultation and investigation or observation and treatment, but does not require hospitalisation and their situation is not life threatening.

General practitioners can also have direct access to WiSE diagnostic imaging and pathology services for patients who do not require consultation with an emergency specialist.

## Benefits of the WiSE Clinic

- ✔ On-site experienced Emergency Specialists
- ✔ Walk-in service with no waiting times
- ✔ Bulk-billed Diagnostics
- ✔ Patients can use diagnostic services without the visitation fees
- ✔ CT, XRAY, Ultrasound and Pathology services with rapid reporting turn-around times
- ✔ Networked with various private hospitals and Emergency Departments, should further inpatient care be required
- ✔ Acute Care Specialist Clinics including Fracture, Pediatrics, Early Pregnancy, Acute Back-pain, Rapid Neurology and Chest-pain Clinics
- ✔ Continuity of care maintained with the patient's general practitioner via Healthlink or Patient Portal
- ✔ Patient's will have access to discharge summaries and results from Pathology and Radiology via their secure login to Patient Portal
- ✔ Dental Clinic open 10am – 10pm 7 days
- ✔ Ambulance/patient transport access available

## WiSE Clinic Fee

Diagnostics bulk-billed

\$200 flat visitation fee\*

No hidden costs\*\*

*\* Not covered by medicare or health funds*

*\*\*Actuals may be charged for certain consumables prescribed and dispensed.*

### CT Scan

Our radiology equipment is the first of its kind in Australia, delivering increased diagnostic sensitivity and specificity. The technology includes gout detection, kidney stone differentiation and bone oedema (which helps differentiate old and new fractures in osteoporotic patients), allowing clinical management pathways to be altered to the benefit of patients. The 'Definition AS+ TwinBeam system' also boasts lung perfusion maps for pulmonary embolism studies, which have seen detection rates increase by 33%.

### Ultrasound and X-ray

Our ultrasound system provides a complete range of radiology, cardiology and point of care imaging, delivering exceptional image resolution and detail to enable more confident and timely diagnoses. This ‘Phillips Premium Affiniti system’ is changing the way we perform ultrasound exams, all contributing to a streamlined and better experience at the WiSE Clinic.

### Pathology

Our on-site pathology delivers immediate results, giving our emergency physicians the ability to diagnose and treat patients faster. The NATA accredited lab utilises the speciality services of Beckman Coulter analysers.

### Dental

Our dental clinic provides a comprehensive standard of care 7 days a week, ensuring treatment planning, services and costs remain consistent. The facility uses digital imaging including panoramic, cephalometric and intra-oral radiography.

Apart from their expertise in dental emergencies, our dentists, hygienists and support staff provide a variety of other services. These services range from comprehensive dental examinations and preventative dental care, through to orthodontics and surgical procedures, such as wisdom teeth extractions and dental implants.
