

Management of Neonates at Risk of Group B Streptococcus

Please Note:

For Asymptomatic with Signs & Symptoms of suspected Chorioamnionitis Or Previous Sibling with GBS Sepsis:

Medical review and use clinical judgement to **consider**: blood culture, Full Blood count at birth and/or 6 -12 hrs following birth, IV antibiotic therapy as per locally endorsed antibiotic prescribing guidelines, review cultures at 24 hours and cease antibiotics at 36-48 hours if clinically well and cultures negative
