Each year influenza affects millions of people globally, interrupting lives, and potentially causing severe complications which can include pneumonia or even heart attacks.¹⁻³ The Facilitate Life Uninterrupted (FLU) app is available on Topbar and designed to help increase influenza vaccine uptake in your practice by helping you identify patients who are recommended for influenza vaccination but are yet to be vaccinated for the current season.

INCREASE INFLUENZA IMMUNISATION COVERAGE IN YOUR PRACTICE WITHOUT INTERRUPTING CURRENT WORKFLOWS

The **FLU** App combines the Australian Department of Health's recommendation, NIP eligibility criteria and the patient record so you can quickly and easily identify patients who are recommended for an influenza vaccination but are yet to be vaccinated for the current season.

With the FLU app, GPs and nurses can:

- Identify missed vaccinations
- · Reduce the risk of vaccination double-dosing
- Increase visibility of vaccination and NIP eligibility status
- Support doctor-patient conversations about the need for vaccination
- Easily view patient alignment to PIP QI measures

THE FLU APP NOTIFIES GPs AND NURSES WHEN PATIENTS ARE RECOMMENDED FOR INFLUENZA VACCINATION

When an eligible patient who is not yet vaccinated against influenza for the current season presents for a consultation, the FLU app uses a simple notification system based on the Australian Department of Health recommendations and NIP eligibility criteria to alert the GP/nurse.

Strongly recommended for vaccination,

AND NIP funded

Strongly recommended for vaccination, **NOT** NIP funded

Recommended for vaccination, **NOT** NIP funded

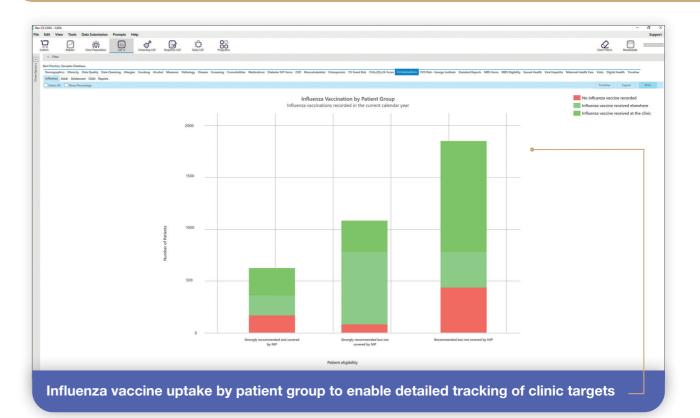

A notification alert automatically appears on the FLU app on Topbar when a patient has yet to be vaccinated this season*

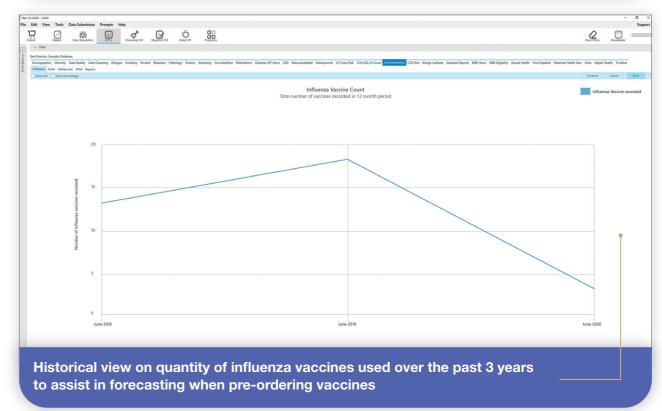

*Australian Department of Health recommends influenza vaccinations for all people ≥6 months of age.⁴ **NIP:** National Immunisation Program; **PIP QI:** Practice Incentive Payment Quality Improvement.

TRACK VACCINE USAGE WITHIN YOUR PRACTICE WITH CAT REPORTS

You can use the FLU app and clinical audit tool (CAT) integration to help you identify, filter and send recalls or reminders to patients who have not yet received the influenza vaccination in your clinic.

Access these influenza reports by clicking the 'immunisation' tab in your CAT.
